Dear Jared Fedorchuk,

My name is Zachary Linzmeyer and I am applying for a Junior Web Developer position. I would describe myself as a lifelong learner, always eager to learn new things and skills. I am capable of working with anyone and can solve any problem thrown at me. Please see attached my resume.

I too share a passion for creating beautiful web designs. I've always been interested in learning how websites are made and so I took an online course, CareerFoundry, to learn how to code. You may view projects that I have completed at https://zaclinz.github.io/portfolio-website/work.html. I also have considerable experience working alongside a team and working alongside clients.

I also have plenty of experience helping customers and working alongside clients and ensuring they get what they want. At the University of Saskatchewan, I took a class in which we learned how to work with and for a client to ensure that we delivered on a professional project that met all of the client's needs.

I appreciate you taking the time to read my application. I am looking forward to hearing back from you and potentially setting up an interview in the near future.

Sincerely,

Zachary Linzmeyer

Zachary Linzmeyer

Full-stack Web Developer

Zachary Linzmeyer is ready to begin a career in web development. He has a huge sense of accountability, as he will tirelessly work to solve problems before they become even bigger headaches. He is a person who would consider himself a lifelong learner and because of this, he is a very fast learner, able to understand concepts very quickly. He is looking forward to applying his drive and dedication to your team.
